Accessibility app in major Tube trial

BLIND and partially sighted people are trialling the new Wayfindr digital navigation system at one of London's busiest Tube stations.

Trial participants will get around Euston by picking up audio directions from a prototype smartphone app that interacts with beacons installed throughout the station, making it easier for them to navigate their way.

Wayfindr, a not-for-profit joint venture of the Royal London Society for Blind People and digital product studio ustwo, has been commissioned by London Underground to trial the technology.

Wayfindr has also attracted a grant from Google.org to accelerate its work over the next three years with the hope it becomes adopted in cities worldwide, in a range of urban environments from shops and stations to hospitals.

The trial at Euston follows a pilot scheme run at Pimlico station earlier this year.
